

In-Database DML Logging Extension

Moshe Jacobson

pgxn.org/dist/cyanaudit

With Cyan Audit You Can:

- Log all DML activity column-by-column.
- Search logs using a simple view.
- Choose what to log using easy config table.
- Link each operation to an application user.
- Give operation a human-readable label.

With Cyan Audit You Can (cont'd):

- Back up & restore logs with supplied scripts.
- Rotate & delete logs with supplied cronjob.
- Keep years of logs on separate tablespace.
- Effectively "undo" any recorded transaction.
- Save time with easy setup and maintenance.

Cyan Audit:

- is written in SQL and PL/pgSQL
- is Trigger-based (synchronous).
- supports PostgreSQL 9.3 and newer.
- has been production tested for >4 years.
- needs to be added on Amazon RDS!

I'd Love Your Feedback!
